

October 2017

**Agrochemicals accepted by the
British Beer and Pub Association
and
Campden BRI
for use on **Cereals****

Agrochemicals accepted by the BBPA (British Beer and Pub Association) and Campden BRI for use on cereals for malting and brewing

The purpose of the BBPA/Campden BRI List

Campden BRI and BBPA aim to test agrochemicals which, because of their chemical nature or timing of application to barley could potentially either affect the malting, brewing or fermentation processes, or cause undesirable off-flavours in the finished beer. In the EU, Council Directive 93/71/EEC (Annex III) requires the effects of pesticides on transformation processes to be taken into account and requires an evaluation of the possible adverse effects on transformation processes, such as brewing and malting, or on the quality of their products.

For a chemical to be included on the list of accepted agrochemicals, Campden BRI will carry out an initial assessment of factors, including chemical nature, mode of action, time of application and available test data. Following this initial assessment, Campden BRI will conduct any additional malting or brewing trials necessary to come to a decision. These further trials do not replace or duplicate the toxicological or efficacy testing required by the Chemicals Regulation Directorate (CRD) before the chemical can be registered, but are designed to test the suitability of treated crops for processing specifically within the malting and brewing industry.

This document is issued in the UK by the BBPA as a Technical Circular and is a comprehensive list of active ingredients **registered in the UK** for barley. Users outside the UK will need to check whether listed chemicals are approved for use in their own countries. **Products are withdrawn from the list if they are no longer registered in the UK by the CRD, even though they do not cause problems in terms of processing.**

Listed agrochemicals are classed as ACCEPTED for use on malting barley for brewing, NOT ACCEPTED or NOT TESTED OR ACCEPTED. Agrochemicals accepted for barley are also accepted for wheat for malting and brewing, provided that they are registered for that use by the CRD. Note that a few pesticides registered for use on wheat are not registered for barley; these have not been evaluated for potential effects in malting or brewing and are therefore not included in this list. The list is **not** exhaustive with regard to Product Names; products which are not listed are accepted if they contain the same active ingredient, and are used at the same growth period and dose as products which are listed. Full product listings are available on the CRD website: <https://secure.pesticides.gov.uk/pestreg/ProdSearch.asp>

Limitations on timing of application apply for some agrochemicals: where these differ from label instructions or the approval notice there is a note in the limitations column. Details of barley growth stages can be accessed on the AHDB website: <https://cereals.ahdb.org.uk/media/180128/g49-cereals-growth-stages-a-guide-for-crop-treatments.pdf>

Maximum Residue Levels (MRLs). These are as given in EU legislation. A MRL is the maximum concentration of a pesticide residue (expressed as mg/kg), permitted in or on food commodities and animal feeds. MRLs are primarily a check that Good Agricultural Practice is being followed and are intended to assist international trade in produce treated with pesticides. MRLs are **not** safety limits. MRLs are established using toxicological and dietary exposure evidence concerning the safety to humans of the resulting residues and this means that MRLs represent residue levels which are toxicologically acceptable. They are generally well below safety limits, thus exposure to residues in excess of an MRL does not automatically imply a hazard to health.

For more details concerning the chemicals listed contact:

Ian Slaiding ian.slaiding@campdenbri.co.uk
Jon Coleman jonathan.coleman@campdenbri.co.uk

01737 824206
01737 824223

The list has been extended to the extent that chemicals accepted for barley are also accepted for use on wheat or other cereals for malting and or brewing. However, this should not be taken to imply that there is a current registration for that chemical on that cereal. The MRLs given are for barley.

The EU expiry date is the date on which approval for the chemical, on any crop, will be withdrawn unless an extension is granted. Approval in the UK for named products containing the chemical is granted by the CRD. The latest expiry date is the latest date on which UK approval for any product for use on barley will expire. Note that some products, including the listed product, may have earlier expiry dates. Some products may be co-formulations with other pesticides. Full details of approved products, together with amendment and withdrawal notices issued since this list was last modified, are available at: <https://secure.pesticides.gov.uk/pestreg/ProdSearch.asp>

MRLs are updated from the EU MRL harmonised database, released Sept 2008:

<http://ec.europa.eu/food/plant/pesticides/eu-pesticides-database/public/?event=homepage&language=EN>

Changes made to the list since April 2017

Type	Active Ingredient	Product Name	Changes
Insecticide	Chlorpyrifos	Various	Authorisations for use on cereals withdrawn
Fungicide	Benzovindiflupyr	Various	Added to the list June 2017
Fungicide	Picoxystrobin	Various	EU authorisation removed by 2017/1455 – authorisations expire 30 November 2018 at latest
Herbicide	Flupyr sulfuron-methyl	Bullion	EU authorisation removed by 2017/1496 – authorisations expire 13 December 2018 at latest
Herbicide	Aminopyralid	Trezac	Added to the list October 2017
Herbicide	Bensulfuron-methyl	Londax	Added to list October 2017, subject to UK approval

Only additions, withdrawals, and changes of status or limitations are noted here. Changes to expiry dates and MRLs are not included in this table.

Changes to the list since the last date are highlighted in **yellow**. Any proposed or upcoming withdrawals are indicated in *italics*.

Active	Product Name (not exhaustive)	Status	Limitations	Expiry (EU)	Latest product expiry (CRD)	Comments	EU MRL	Codex MRL
Insecticides for admixture with grain or in empty grain stores								
Aluminium phosphide	Detia Gas-Ex-T, Phostoxin	Accepted	Grain storage only	31/08/2019	31/12/2021		0.1	0.1
Chlorpyrifos-methyl	Reldan 22	Accepted	Grain storage only: store for 90 days before malting	31/01/2018	31/12/2021		3	-
Cypermethrin	Talisa EC	Accepted		31/10/2018	30/04/2020	Extended by Commission Implementing Regulation (EU) 2017/1511	2	2
Deltamethrin (with piperonyl butoxide)	K-OBIol formulations, Grainstore, Grain-Tect ULV	Accepted	Grain admixture and empty stores	31/10/2018	30/04/2020	Extended by Commission Implementing Regulation (EU) 2017/1511	2	2 (delt) 30 (pip)
Diatomaceous Earth	Demeter, SilicoSec, DiaMite	Accepted	Grain storage: subject to continued UK and EU registration				No MRL	-
Magnesium phosphide	Detia Gas-Ex-B-Forte, Degesch Plates	Accepted	Grain storage only	31/08/2019	31/12/2021		0.1	0.1
Pirimiphos-methyl	Actellic 50EC, Pan PMT	Accepted	Grain admixture	31/07/2018	31/12/2021		5	7
Pirimiphos-methyl	Actellic Smoke Generator	Accepted	Empty stores & transport only	31/07/2018	31/03/2020		5	7
Pyrethrins	Aquapy	Accepted	Grain stores only	31/08/2019	31/12/2021	Pest control product approved by HSE	3	0.3
